STAT

AEROLOGY

THE METHOD OF SINGLE-POINT

PILOT BALLOON OBSERVATIONS

I. Ya. Tanatar

Publication of the Ministry

of the Armed Forces of the USSR

Moscow, 1948

TABLE OF CONTENTS

9. The vertical velocity of the pilot balloon.

10. The tabulated vertical velocity of the pilot balloon
and the methods for its determination.
Questions, exercises, and problems relating to Chap-
ter 1.

CHAPTER 2

THE PRIMARY PROCESSING OF THE PILOT
BALLOON OBSERVATIONS

11. The pilot balloon coordinates.

12. The projection of the path of the pilot balloon. The
aerological wind.

13. The analytical method of processing pilot balloon
observations.

14. The general principles of graphic representation of
pilot balloon observations.

15. The meter-per-second scale.

16. The radiant grid (cartogram), and its use for the pro-
cessing of pilot balloon observations.

17. The Molchanov disk and its use in the processing of
pilot balloon observations.

17 (cont'd). Questions, exercises, and problems relating to Chapter 2.

## CHAPTER 3

### AEROLOGICAL THEODOLITES

18. The purpose of the aerological theodolite and its diagram.

19. The basic components of the aerological theodolite, their working principles and interaction.

20. The optical system and telescope arrangement of the aerological theodolite.

21. The level design and the leveling of the theodolite.

22. The compass arrangement and the orientation of the theodolite by compass.

23. The theodolite electric lighting arrangement.

24. Sources of error in the readings of the theodolite instruments.

25. Corrections to aerological theodolite readings.

26. Particular features of the following theodolites: ShT /pilot balloon/, Kuznetsov, and Watts.

27. Self-recording theodolites.

- 4 -

28.  Maintenance and care of theodolites and the elimi-
     nation of inaccuracies.
     Questions, exercises, and problems relating to Chap-
     ter 3.

CHAPTER 4

HYDROGEN AND THE PILOT BALLOON ENVELOPES

29.  Hydrogen, its physical and chemical properties.

30.  The working principle of hydrogen balloons.

31.  Manometers and manodetanders /reduction valves/.

32.  Industrial and field methods for the obtaining of hy-
     drogen.

33.  Balloon gas producers, their working principle and
     operation.

34.  Types of pilot balloon envelopes, their dimensions,
     weight, and inflation standards.

35.  Storing pilot balloon envelopes.  Inflating and mea-
     suring of inflated envelopes.
     Questions, exercises, and problems relating to Chap-
     ter 4.

## CHAPTER 5

## CONDUCTING PILOT BALLOON OBSERVATIONS

36. The selection of the observation point and the installation of the theodolites.

37. Theodolite orientation and determination of azimuths.

38. The technique of pilot balloon observations.

39. Constructing the aerological bulletin and the monthly pilot balloon tabulation.

40. The pilot balloon code. The makeup of the telecommunication "Aviapilot."

41. Nocturnal pilot balloon observations.
Questions, exercises, and problems relating to Chapter 5.

## CHAPTER 6

## THE SOURCES AND THE EXTENT
## OF ERRORS IN SINGLE-POINT
## PILOT BALLOON OBSERVATIONS

42. Sources of errors in the pilot balloon method.

43. Errors in wind velocity determination.

44. Errors in wind direction determination.

45. The altitude range of the most reliable pilot bal-
loon observations and their degree of precision.
Questions, exercises, and problems relating to Chap-
ter 6.

ADDENDA

1. Hypsometric table at 0 degrees Centigrade.

2. Table for the determination of the vertical velocity
of pilot ballon W in meters per minute along the peri-
phery of circumference C in centimeters and in the
presence of a free lifting force A in grams.

3. Table of air density correction factors $\sqrt[4]{N}$ for the
vertical velocities of pilot balloons.

4. Table of the products of the vertical velocities by
the correction factor $\sqrt[4]{N}$ .

5. Table for the determination of the pilot balloon ver-
tical velocities by weight of envelope q and by the
free lifting force A.

6. Table of the products of the correction factors.

7. Blank for the processing of pilot balloon observations
by the analytical method.

- 7 -

8. The radiant grid (cartogram) for processing the pilot balloon observations by the graphic method.

9. The diagram of the Molchanov disk.

10. Isogonic map for 1930.

11. Isoporic map.

12. Time zone map of the USSR.

13. The time equation and the declination of the sun at mean Greenwich meridian.

14. Form for recording pilot balloon observations.

15. Field book for recording pilot balloon observations (weather service form VVS).

16. Field book for recording pilot balloon observations (Form GUGMS).

17. Aerometeorological bulletin.

18. Tabulation of pilot balloon observations.
